

METHODOLOGY & DEFINITIONS

- Focus Time: Total milliseconds of active focus sessions tracked via the Focus10010 stopwatch, converted to hours ($\text{ms} \div 3,600,000$).
- Day Boundary: Days are offset by " 4 hours from UTC midnight to account for late-night sessions (previous day).
- Weekly Period: The most recent 7 calendar days (including today).
- Monthly Period: The most recent 28 calendar days (4 complete weeks).
- All-Time Period: The most recent 365 calendar days.
- vs Last Period: Compares the current period's total hours against the immediately preceding period ($\text{current} \div \text{previous} \times 100$).
- Daily Average: Total period hours $\div$ number of days in that period.
- Streak: A day counts toward a streak if "e 30 minutes (1,800,000 ms) were logged. Today is excluded.
- Tags: User-applied activity categories. Tag durations are tracked per-session and summed per day.

This report was generated by Focus10010 (focus10010.app). All times are in hours unless otherwise noted.
